

Mission Awareness

ADS TEAM

Problem: We don't know officially what drives users to link their account beside the reward associated to it as we don't use any formal frameworks

Hypothesis: By increasing the Partner brand awareness, users are most likely to link their account and engage further into the conversion funnel

Overview & results (Mission KPI)

Overall **-0.63pp** of compared to control. That's about a **-22.7% relative improvement**, highly significant

	Tot. Activated	Tot. Completed	Completion rate
Control	237,419	6,584	2.77%
Variant	240,512	5,158	2.14%

Partner	Control	Mission Awareness	Δ (pp)
Winline	2.92%	2.53%	-0.39 pp
WhiteMarket	2.88%	2.25%	-0.63 pp
Tradeit	2.58%	1.82%	-0.76 pp

Key Learnings

Building on all the insights gathered so far through the CDP, we've identified three main user types when it comes to linking their accounts.

1. **Highly Interested Users:** Already engaged with the vertical; they link accounts naturally and require little to no extra motivation.
2. **Incentive-Driven Users:** Not inherently interested in the brand or vertical, but respond to rewards. However, their engagement typically drops after the reward is received.
3. **Unresponsive Users:** Show low interest overall and are not motivated by either the brand proposition or incentives.

Because of the hypothesis above, users might perceive the learning step as a friction point

Proposed Next Steps

1. **Reutilise the existing UX modal** to support additional stages of the user funnel, extending its impact beyond account linking.
2. **Focus future experiments on active players who have not yet linked their accounts**, to drive higher conversion efficiency.
3. **Refocus top-of-funnel efforts around the Branded Event**, leveraging it as the primary awareness and engagement driver.

Engagement Engine POC

ADS TEAM

Long Term Vision: “Engagement Engine”

Build an automation system designed to drive users from awareness to loyalty through personalised engagement strategies.

Using a combination of 1st data (e.g., user activity status, player type, premium tier) and partner data (e.g., KYC completion, deposit or conversion events), the engine delivers:

- Personalised competitions such as Missions, Branded Events, or Drops
- Tailored rewards and incentives aligned with user intent and lifecycle stage
- Smart reminders and re-engagement messages at optimal moments

The Engagement Engine functions as an automated, data-driven CRM, deciding (ML based) the right message, reward, or experience at the right time to guide each user through the funnel, from user acquisition to long-term loyalty.

Hypothesis:

By sending timely, psychologically framed reminders during user activity, can effectively drive higher challenge completion.

- **Mission Completion Boost:** Can timely reminders increase challenge completions?
- **Notification Visibility:** Do users actually see and engage with activity notifications?
- **Psychological Hooks:** Which framing (progress, urgency, skill, competition) drives the most clicks

Overview of the results (Mission KPI)

Experiment Results: Control vs Engagement Engine

Overall a very slight uplift of **+0.21 pp** compared to control. That's about a **0.6% relative improvement**, tiny, but consistent at aggregate level.

	Tot. Activated	Tot. Completed	Completion rate
Control	541,716	192,186	35.5%
Variant	541,651	193,945	35.8%

Control vs Engagement_engine (all organisers, all challenges combined)

The Engagement Engine helped on *retention / whale*. Its improves completion rate if user did it before (bet, deposit, trade) and doesn't help with first time action: link account, identification, first dep, first trade

Сделайте ставку от 1000 рублей (<i>Place a bet of 1000 RUB</i>)	+6.7pp
Ставки на сумму 25,000 рублей (<i>Total bets of 25k RUB</i>)	+2.0pp
Deposit 5000 RUB	+1.6pp
Deposit 3000 RUB	+1.1pp

Top positive uplifts (engagement_engine > control)

Activity notification overall result

Total Impressions: ~825K	Total Clicks: ~76K	Overall CTR $\approx$ 9.2%
--------------------------	--------------------	----------------------------

- Across all notifications, there were **~1 million impressions** and **~90k clicks**, giving an overall **CTR of ~9%**.
- Notifications worked overall, outperforming typical Faceit AN (0.5%),
- That's a very strong CTR for notification campaigns (industry benchmarks for push/app notifications fall between 2–5%)
- This suggests the notification channel itself is effective for nudging users toward mission completion.

KPI on Activity Notification vs Challenge completion

Do missions that had higher-completion uplift (in the EE experiment) also line up with the CTR of the activity notifications that were tied to them?

WL Challenge	Avg CTR (notif.)	Control Completion	EE Completion	Uplift (pp)*	Uplift (%)*
Complete Identification in Platform	8.2%	2.24%	2.75%	+0.51 pp	+23.0%
Deposit 3000 RUB	18.9%	12.63%	13.69%	+1.06 pp	+8.4%
Deposit 5000 RUB	12.6%	12.47%	14.12%	+1.65 pp	+13.2%
Winline KYC	8.2%	1.23%	1.35%	+0.12 pp	+10.1%
Bet 1000 RUB	23.5%	43.75%	50.46%	+6.71 pp	+15.3%

Tradeit Challenge	Avg CTR (notif.)	Control Completion	EE Completion	Uplift (pp)*	Uplift (%)*
Trade an item \$1000+	18.9%	13.57%	6.67%	-6.9 pp	-50.9%
Trade an item \$250+	12.6%	7.75%	8.35%	+0.60 pp	+7.8%
Trade any item with Tradeit	8.3%	1.78%	2.15%	+0.37 pp	+20.8%

*Challenges performances associated to the CTR not the total conversions

Activity notification detailed result

“Notifications are strongest for transactional/engagement actions (trade, bet2) and weaker for onboarding actions (AL, KYC, dep).”

- **Trade and Bet** notifications massively outperformed others, with CTRs well above 15–20%, peaking at almost 37% for trade.
- **Early funnel tasks** (Account Linking, KYC, FTD) had much lower CTRs (~8%), suggesting users are less motivated to act on these reminders, possibly due to higher friction or perceived lower reward value.
- **Later deposits** (dep2, dep3) show improving CTRs, meaning once users have started depositing, they are more responsive to nudges to continue.

Unique Notification Name	CTR	TOT. CLICKS	TOT. IMPRESSIONS	Unique Users
1. Trade*	36.9%	235	637	100
2. Bet	20.0%	482	2,413	528
3. Deposit 3 (dep3)	18.9%	12,214	64,400	9,086
4. Deposit 2 (dep2)	12.6%	6,089	48,218	6,087
5. Deposit 1 (dep1)	8.3%	52,342	630,119	97,506
6. KYC	8.2%	17,665	215,515	37,216
7. Account Linking (AL)	8.2%	4,376	53,683	21,147

AN Theme Performances

trade_skill_challenge	62
trade_competitive_pressure	46
trade_progress_completion	37

AN Theme Performances

Theme (weighted across all challenges)	CTR
Progress Completion	10.6% (best performing)
Live Reward Rush	9.4% CTR
Skill Challenge	7.8% CTR
Competitive Pressure	7.4% CTR

Overall, framing around progress and immediacy (completion + reward rush) is much more effective than framing around ability or competition.

- **Progress-based** framing works best: users respond when they see how close they are to completion.
- **Urgency (Reward Rush)** is also effective, while competitive and skill framings are weaker.
- **Live Reward Rush** also performed well, which makes sense in contexts where urgency or limited-time framing drives clicks.

Activity notification final insights

- How many unique users might have seen the EE AN? **160,000**
- How many unique users clicked on the EE AN? **42,000**
- How many players joined at least one Mission? **287,000**
- How many UU we sent at least one EE AN? **163,214**

What happened to the 40% of users that we didn't get an impression notification?

Didn't see it, weren't active or complete the challenge on day 1

Might be because we only send the AN when the user played a match ("active") and the EE started after the user is active in Day 2

Key Takeaway

“Given the relatively high engagement, the experiment validates that reminder mechanisms are a valuable tool to move users through the funnel”

1. **Reminders work (screaming doesn’t)** → But modestly on average. Overall uplift in completions was small (~+0.2 pp), but at scale that’s still meaningful.
2. **Physiological Theme framing matters** → *Progress* (10.6% CTR) and *Urgency/Reward Rush* (9.4% CTR) consistently outperformed other hooks. *Skill* (7.8%) and *Competition* (7.4%) were weaker motivators.
3. **Very effective when users are engaged with the brand** → Medium-barrier actions (e.g. deposit 3k/5k RUB, bet 1k RUB) showed both high CTR and strong completion uplifts. However, the EE is still not enough to move users from the Top the funnel
4. **The declining number of unique users reached in later reminders (Day 7, Day 10)** is primarily due to users becoming inactive, not because most have completed the challenges. Completions do contribute modestly to the decline, but the dominant factor is attrition in user activity – users disengage over time, leading to fewer eligible recipients for subsequent reminders.

If users were primarily completing challenges, we'd expect CTR to remain strong later (because fewer users, but highly motivated). However, CTR actually declines → meaning fewer users are even engaging, not just fewer being eligible.

Proposed Next Steps

1. **Optimize and simplify UX integration:**
 - a. Blend notifications into the mission UX → reduces reliance on push messages alone.
2. **Refine targeting:**
 - a. Prioritize medium-barrier transactional challenges where reminders clearly move the needle
 - b. Limit notifications for high-friction challenges (e.g., 25k deposit) – focus on lowering barrier instead.
- 3.

Sequence Segment (mission chain)

ADS TEAM

Problem: unlinked users can autocomplete previously finished challenges (e.g., KYC, first deposit) after linking their partner account, wasting partner reward budgets.

Hypothesis: By showing only one active mission per partner KPI (AL -> KYC & FTD, 2nd Deposit, etc), we can optimise the reward budget allocation while maintaining continuous user engagement between activations, without impacting the completion rate

Mission Series Flow

Overview & results (Mission KPI)

Methodology

- We excluded the agnostic missions as user could do it before linking account.
- We compared challenges from targeted segments.
- Segments: *NO KYC* we check pass *KYC* challenge and Trade. These challenges are key to influence the KPI.
- We had to exclude WM due to low completion rate and not representative (~100k activations and 20-30 completions)

Overall a very uplift of **+4.15pp** compared to control. That's about a **43.1% relative improvement**, highly significant ($p < 0.001$), indicating a very strong likelihood that the observed uplift is not due to chance

	Tot. Activated	Tot. Completed	Completion rate
