

Mystery Box — Account Linkage Uplift

Winline · Jan–Feb 2026 · Completed

Moritz Natalini · Ads & Partnerships · EFG

VERDICT

- **+61% relative lift** in account linkage completion rate (1.36% → 2.19%)
- **Clean signal** — user quality and volume comparable between groups
- **Cost insight flagged** — equal tier distribution inflated costs, now fixable with weighted probabilities

1. EXPERIMENT DESIGN

Problem: In long-term partnerships, account linkage rates decline over time, limiting partner value and reducing users entering the funnel.

Hypothesis: A "mystery reward" framework uses curiosity and variable-reward psychology to increase motivation. Users perceive a free, low-effort opportunity with potential upside.

Test Design

GROUP	DESCRIPTION	REWARD
Control	Standard linkage mission	Fixed: 500 FP
Variant	Mystery Box linkage mission	Random from 4 tiers

Reward Tiers

TIER	REWARD	SHARE
1	Premium Monthly Sub	24%
2	1,000 FP	26%
3	250 FP	25%
4	500 FP	25%

Note: Equal distribution across all tiers (uncapped) — due to time constraints preventing calibrated weighting.

2. RESULTS

ACTIVATED USERS

~293K

Total across both
groups

CONTROL CONV.

1.36%

1,854 / 147,105

VARIANT CONV.

2.19%

2,955 / 146,131

RELATIVE UPLIFT

+61%

Variant vs Control

Results Breakdown

GROUP	ACTIVATED	COMPLETED	COMPLETION RATE
Control	147,105	1,854	1.36%
Variant	146,131	2,955	2.19%

Signal Quality

User quality and volume were comparable between groups — positive signal is clean.

3. COST ANALYSIS & NEXT STEPS

Cost Breakdown

MISSION	COMPLETIONS PAID	COST
Variant (Mystery Box)	2,028	\$616 + \$5K prize pool
Control	1,864	\$739

Key Insights

Cost Flag: Equal reward distribution across all tiers (including highest-value Premium subs at 24%) inflated variant costs. Backend now supports weighted probabilities to control CPA.

Compliance Note: Account linking does not involve payment from users. No cost to participate — does not constitute gambling.

Next Steps

1. Calibrate reward weights to reduce CPA (weight lower tiers more heavily)
2. Evaluate Mystery Box as the default mechanic for all linkage missions
3. Test Mystery Box vs Drops to compare gamification approaches
4. Follow-up experiment running with Tradeit — per-challenge level (deeper funnel)

4. PARTNER VALUE PROJECTION — IF MYSTERY BOX GOES TO PRODUCTION

Model: Applying the observed +61% AL uplift to each partner's NSM value per Account Linkage. Projections are per mission cycle (~147K eligible users per group, matching experiment scale). Annual estimates assume ~12 mission cycles/year.

NSM Values Used

PARTNER	€ PER AL	SOURCE
Winline	€4.33	BQ + Partner CRM
Tradeit	€0.38	BQ + Partner CRM

Uplift Applied

METRIC	CONTROL	MYSTERY BOX
AL rate	1.36%	2.19%
ALs per 100K eligible	1,360	2,190
Incremental ALs per 100K	—	+830

Value Per Mission Cycle (per 100K eligible users)

PARTNER	€/AL	CONTROL VALUE	MYSTERY BOX VALUE	INCREMENTAL VALUE	UPLIFT
Winline	€4.33	€5,889	€9,483	+€3,594	+61%
Tradeit	€0.38	€517	€832	+€315	+61%

Annualised Projection (~12 mission cycles/year)

WINLINE INCREMENTAL	TRADEIT INCREMENTAL	COMBINED INCREMENTAL
+€43K	+€3.8K	+€47K
~€3,594 × 12 cycles/yr	~€315 × 12 cycles/yr	Per 100K eligible users/partner

Scaling Note

Winline's eligible pool is ~450K active players (RU). At full scale, the annualised incremental value could reach ~€194K for Winline alone. Tradeit's eligible pool spans 169K+ users across multiple regions — with Mystery Box already driving their March 2026 spike to €68.7K (5× prior months).

Downstream Caveat

These projections are based on AL value only (top of funnel). The full partner value depends on downstream conversion quality (KYC, FTD, trades). Mystery Box drives volume, but Q2 priorities include tightening the conversion ladder to ensure AL uplift translates to proportional C1/C2 value.
